

Bleed-Block is a revolutionary feed supplement to help address on-going issues with **Exercise Induced Pulmonary Haemorrhage (EIPH)**, Bleed-Block contains no banned substances and is completely safe to use on competition horses during competition.

Bleed-Block differs from the standard anti-bleeding supplements as its key ingredients aim to strengthen the lung tissue and blood vessels, reduce blood pressure and more effectively reduce bleeding. This product is completely drug free.

Benefits of Bleed Block

- Strengthens the lung tissue and blood vessels
- Helps Reduces Blood Pressure
- Drug Free assistance for EIPH
- Improves circulation
- Improved pulmonary activity
- Improves condition/Top line
- Boosts immune system
- Encourages maximum nutritional benefit from feed

KEY INGREDIENTS THAT MAKE

CircQlate™ improves the distribution of nutrients by actively improving blood flow and increasing circulation resulting in an animal that has a more competitive look. **CircQlate** is a special selection of proteins and amino acids that is combined with the original Oxy-Gen formula to create the most revolutionary livestock supplement on the market.

CircQlate™ combines the proven results of the original **Oxy-Gen®**. This select combination of proteins and amino acids form the most revolutionary livestock supplement ever created! No competitive product even comes close! **CircQlate™** is powerful, highly palatable, and like all our products, it is safe, natural, and drug-free.

The inclusion of the original **Oxy-Gen** formula is designed to allow the respiratory and cardiovascular systems to work more efficiently. Very simply, if the heart and lungs work better, everything does. Get a boosted immune system, more top line and hindquarter muscle, as well as better feed utilisation.

This product deals exclusively with bleeders. We took a little different approach to treating this problem by designing an ingredient that helps elevate Vitamin K production in the horse's own body and boosts the animals immune system.
