

Equi-Buck

GREAT FOR A HEALTHY COAT, DIGESTIVE HEALTH AND CAN HELP PREVENT COLIC
AND ULCERS.

100% NATURAL, CONTAINS VITAMINS A,B,C,D,E & K, OMEGAS 3,6,7 &9

A surprisingly high percentage of horses suffer from gastric ulcers to one degree or another. Understanding the signs and symptoms is an important part of being a horse owner if you want your horse to be healthy and performing at its best.

Which horses are prone to gastric ulcers?

- 90% of Race Horses
 - 60% of Performance Horses
 - 50% of Foals
 - 30% of Leisure Horses
- *approximate percentages

What are equine gastric ulcers?

Equine Gastric Ulcer Syndrome (EGUS), a term used to describe horses with gastric ulcers, refers to damage to the horse's stomach lining from excessive stomach acid. This acid induced damage can cause great discomfort, not to mention reduced performance and condition problems. In some cases, usually in foals, ulceration can be severe enough to cause death.

Can gastric ulcers be prevented?

You can reduce the potential for gastric ulcers by eliminating the risk factors that have been proven to cause them. You can also use preventative treatments during times of risk.

How can Equi-Buck help prevent equine gastric ulcers?

Equine Gastric Ulcer Syndrome (EGUS) is a common medical problem in horses. Current pharmaceutical treatments are expensive and reduce the acidic environment of the stomach, which may affect digestion.

Seabuckthorn has recently been the focus of a study at Louisiana State University to evaluate the effects that sea buckthorn berry pulp has on the treatment or prevention of gastric ulcers in horses.

Equi-Buck contains sea buckthorn berry pulp, which is a rich source of vitamins, omega fatty acids, trace minerals, amino acids, antioxidants and other bioactive substances.

The study concluded that:

- **Seabuckthorn** prevented the worsening of glandular ulcers during feed deprivation in the horses in the study.
- The horses treated with **Seabuckthorn** had fewer and less severe non glandular ulcers,
- **Sea buckthorn** , may have efficacy in preventing ulcers from forming or existing ulcers from worsening in horses that are stall confined and undergoing a feeding stress.

Equi-Buck is a cost effective way to help prevent equine gastric ulcers. In addition to the benefits it offers for ulcer prevention, the product also:

- Helps maintain a healthy shiny coat.
- Helps maintain consistent eating habits during times of stress.
- Provides powerful antioxidants.
