

EQUINE PROBIOTIC SUPPLEMENT

Beneficial for

- Loss of appetite
- Illness or antibiotic therapy
- Environmental stress
- Pre and post travel
- Diarrhea or colitis
- Senior horses
- Dietary changes
- Post deworming
- Post surgery
- Daily support for a healthy digestive system

In a healthy state, the horse is host to billions of micro-bacteria that maintain the delicate balance of the digestive tract. These bacteria are a critical component for absorption of nutrients from ingested feedstuffs. ProEntera assists in repopulating and regulating these intestinal microbes when certain management concerns may be present.

ProEntera is an equine specific direct fed microbial that combines live cultures of lactobacillus reuterii and saccharomyces boulardii. Veterinary formulated ProEntera contains 10-20 times the amount of bacteria when compared to competitive products and is the only product available that is derived from equine origin.

ProEntera Powder – Dose – 7 grams/day
 7 grams provides – 2.5 billion
 CFU lactobacillus
 reuterii & 5.0 billion CFU
 saccharomyces boulardii
